asciia bay: fonts

Every font the game uses, where, and what players see. State of main at commit ff692b3. Players = the live game; developer-only tools are listed separately at the end.

1. The game font (bundled, every player sees the same)

Two fonts ship with the game in `src/fonts/`, loaded before the game starts (`src/font.ts`). Both are cut down to the characters the game uses and centred in a **0.6em-wide character cell**, the cell every sprite, the terrain grid and the camera were made for (CH_EM = 0.6, ground blocks 8.4 × 8.4 px at the 14 px font).

Font	Role	Source	Weights / files	Size
Asciia Mono	**Main font.** All text and all glyph art	Cascadia Code 2407.024 (Microsoft), via @fontsource/cascadia-code 5.3.0. Renamed because its licence reserves the name "Cascadia Code" for unmodified copies.	400, 500, 600, 700 asciia-mono-*.woff2	~14 KB each
Sarasa Mono	**Fallback only.** Draws the characters Cascadia lacks	Sarasa Mono SC 0.36.0 (Belleve Invis), via @fontpkg/sarasa-mono-sc	regular (≤ 550), bold sarasa-mono-*.woff2	~55 KB each

Samples, drawn in the bundled files themselves:

Asciia Mono 400: LITTLE THINGS ADD UP · Collect 3 resources · 0 / 3
Asciia Mono 600: Gather a few useful things to start your new life
Asciia Mono 700: @#*oO.,~-_=+|/\()<>^v;:!%&
Sarasa Mono (fallback glyphs): ‡ ◦ ◆ ◇ ● ◦ ○ ⁂

Ligatures and contextual alternates are removed from both, so "->" or "==" in a sprite stay two characters. `scripts/subset-font.py` rebuilds them; it fails if a character crafting or the terrain can produce is in neither font one column wide.

2. Where the game font is used

Part of the game	What draws it
World: placed assets, player, Mitchy, crops, bench, fences, palms, dates	Canvas sprites, font read from the page (--game-font)
Terrain glyphs on the ground and water, minimap	TerrainCanvas / GameMap canvases, same font
HUD, quest panel, dialogue, shop, inventory, all panels and prompts	CSS: body { font-family: var(--game-font) }
Crafting: glyph atlas the AI items are baked with	src/glyph/atlas.ts (GAME_FONT)
Intro cinematic: glyph scenes and title	src/cinematic/config.ts GLYPH_FONT = GAME_FONT, .cin-title
Intro narration text	.introa-narration-text
Glyph Generator tool: baking and previews	tools/glyph-ref loads the same fonts first

3. Emergency fallbacks (only if the bundled files fail to load)

The game first shows "The game font couldn't load" with Retry and Play anyway. Playing anyway uses the first of these that is installed, each scaled to the 0.6em cell and given Cascadia's line metrics (styles.css "Game Fallback

…"), so the grid and baseline still hold:

Face	Local font	Own width	size-adjust
Game Fallback Cascadia	Cascadia Code / Mono	0.586 em	102.41 %
Game Fallback Consolas	Consolas (Windows)	0.550 em	109.13 %
Game Fallback Menlo	Menlo (macOS)	0.602 em	99.65 %
Game Fallback DejaVu	DejaVu Sans Mono (Linux)	0.602 em	99.65 %
Game Fallback Courier	Courier New	0.600 em	99.98 %
monospace	the browser's default	varies	none

4. Fonts that come from the player's device (not bundled)

Where	Font stack	Note
Intro cinematic: the desktop / laptop screen UI (.cin-screen)	'Segoe UI', system-ui, -apple-system, 'Helvetica Neue', Arial, sans-serif	Interface text of the fake computer screen; looks like each OS
Emoji in panels (the cherry blossom, footprints …)	System emoji font: Segoe UI Emoji / Apple Color Emoji / Noto Color Emoji	Neither bundled font has emoji
Wide sprite characters ◆ ◇ ○ ※ (sprites.json), ● (palm.json)	Sarasa Mono (bundled)	Two columns wide: centred in their cell, they spill into neighbours (as before); the grid holds

5. Developer-only (players never see these)

Where	Font
DEV "Skip Intro" button, cinematic dev panel	ui-monospace, Menlo, Consolas, monospace
World editor: theme colour hex fields	monospace
Glyph Generator tool interface (buttons, lists)	ui-sans-serif, system-ui, sans-serif
Editor / tool icons (pencil, rotate, cross arrows)	a system font (in neither bundled font)

Licences

Both fonts are under the SIL Open Font License 1.1; the full text, copyrights and the renaming note are in `src/fonts/OFL.txt`.
